```
BI021150 307 bp mRNA linear EST 14-JUN-2001 CMO-MT0351-150101-736-b03 MT0351 Homo sapiens cDNA, mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Bukaryota; Metazoa; Chordata; Craniata; Vertebrata; Buteleostomi; Mammalia; Butheria; Primates; Catarrhini; Hominidae; Homo. 1 (bases 1 to 307)
Dias Neto, E., Garcia Correa, R., Verjovski-Almeida, S., Briones, M.R.,
                         Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ALIGNMENTS

//note="Oggan: Bone; Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: EcoR I; Site 2: Not I; NCI CGAP DF0 is a cDNA library containing the following tissue(s): Subchondral Bone. The library was constructed according to Bonaldo, Lemnon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an EcoR I adaptor, digested with Not I, and cloned directionally into pT7T3-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the (dT)18 tail. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gene Index

The Def-X CC polypeptide can be used as an antimicrobial, antiparasitic agent or CC a pesticide. The Def-X polypeptide can be used as a cytostatic (especially anticancer) agent, and as an agent for modulating processes CC of inflammation, tissue repair and endorine (especially corticostatic) regulation. The polypeptide can be used in a composition for external topical use, especially in a cosmetic composition. Compositions (containing Def-X can be used for prevention and treatment of microbial and parasitic infections, especially where the microbial or parasitic infections or especially where the microbial or parasitic infections are gram-positive or -negative bacterial infections or mycobacterial, fungal or spirochaete infections, or where the viral infections are associated with enveloped viruses, especially HIV. The compositions can used for prevention and/or treatment of cancers, compositions can used for prevention and/or treatment of cancers capacially in the case of AIDS, or preventing immunity, the capacially in the case of AIDS, or preventing immunity inflammatory processes, especially in the case of AIDS, or preventing as well as for modulating inflammatory processes, especially in the case of AIDS or preventing the case of chronic inflammatory calsories.

The Def-X
C polypeptide can be used as an animicrobial, antiparasitic agent or
CC a pesticide. The Def-X polypeptide can be used as a cytostatic
CC (especially anticancer) agent, and as an agent for modulating processes
CC of inflammation, tissue repair and endocrine (especially corticostatic)
CC regulation. The polypeptide can be used in a composition for external
CC containing pef-X can be used for prevention and treatment of microbial
CC and parasitic infections, especially where the microbial or parasitic
CC infections are Gram-positive or -negative bacterial infections or
CC infections are associated with enveloped viruses, especially HSV and HIV.
CC especially melanomas, or liver cancer, prostate cancer, non-small-cell
CC lung cancer or colorectal carcinoma, and for enhancing immunity,
CC especially in the case of AIDS, or prevention deficiency,
CC inflammatory processes, especially in the case of formations as well as for modulating
CC inflammatory processes, especially in the case of AIDS, or preventions as well as for modulating

                                                                                                                                                                                                                                                                                                                      (especially anticance) agent, and as an agent for modulating processes of inflammation, tissue repair and endocrine (especially corticostatic) of inflammation, tissue repair and endocrine (especially corticostatic) or regulation. The polypeptide can be used in a composition for external control use, especially in a cosmetic composition. Compositions or control of microbial or control of infections or control of microbial or parasitic infections, especially where the microbial or parasitic infections or endocrine infections or mycobacterial, fungal or spirochaete infections, or where the viral confections are associated with enveloped viruses, especially HSV and HIV. The compositions can used for prevention and/or treatment of cancers, cespecially melanomas, or liver cancer, prostate cancer, non-small-cell lung cancer or colorectal carcinoma, and for enhancing immunity, cespecially in the case of AlDS, or preventing immune deficiency, cespecially in the treatment of psoriasis, as well as for modulating inflammatory processes, especially in the case of chronic inflammatory
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The present sequence encodes human defensin (Def-X). The Def-X polypeptide can be used as an antimicrobial, antiparasitic agent or a pesticide. The Def-X polypeptide can be used as a cytostatic (especially anticancer) agent, and as an agent for modulating processes
                                                                                                                                                                                                                                                                                     Sequence 4415

                                                                                                                         This invention relates to a combination comprising several cDNAs that C are differentially expressed in activated vascular tissue. The invention CC also discloses a high throughput method for detecting differentially CC expressed cDNAs in a sample. The cDNAs of the invention may have CC antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; CY gynaecological; vasotropic and cerebroprotective activities and may be used in gene therapy. The cDNAs of the invention may be used in a compound that specifically binds a cDNA of the convertion of the compounds to identify a molecule or compound that specifically binds a cDNA of the compounds to identify a molecules or compound that specifically binds a cDNA of the compounds to identify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can compound to detect a protein in a sample or purify a natural or compounds to identify a ligand that specifically binds to the protein from a sample. The nucleotides may be useful for creambinant protein from a sample. The nucleotides may be useful for creambinant protein from a sample. The nucleotides may be useful for creampounds in a treating, or monitoring the progression of creatment of a vascular disease, e.g. atherosclerosis, cancer, coronary creatment of a vascular disease, e.g. atherosclerosis, cancer, coronary creatment of a vascular disease, e.g. atherosclerosis, cancer, coronary creatment of a vascular disease, e.g. atherosclerosis, cancer, coronary creatment of avascular disease, e.g. atherosclerosis, cancer, coronary creatment of avascular protein and the proteins encoded by the coronary creatment of a coronary research proteins and coronary creatment of avascular tises to the proteins encoded by the coronary creatment of dispnosing pre-pathologic disorders, and chronic coronary creatment of the protein that is differentially expressed in activated vascular tissue.
                                     represents a cDNA of the invention that is differentially expressed in activated vascular tissue.

Note: The sequence data for this patent did not form part of the specification, but was obtained in electronic format directly from USPTO at http.seqdata.uspto.gov/sequence.html?DocID=20020137081.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several CDNAs that are differentially expressed in activated vascular tissue -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1; Page -; 18pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         The invention relates to novel retrocyclin peptides. Peptides and methods of the invention are useful for preventing retroviral infection cells susceptible to bacterial or viral infections, or treating patients having infections such as HIV (human immunodeficiency virus) sexually transmitted diseases, bacterial vaginosis or ophthalmic infections. The retrocyclin-mediated killing is useful for modelling and screening novel antibiotics. The invention is also useful in general

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  defensin peptides. Prof. the libraries were human genomic and CDNA
libraries. Hybridisation and partial sequence analysis of the
identified clones contained previously characterised myeloid derived
defensin sequences as well as new defensin related sequences. Two
clones expressing new defensin related sequences were extensively
characterised and found to contain genes selectively expressed in
paneth cells of the small intestin. These paneth cell-derived
defensins are designated human defensin 5 and human defensin 6 and
are referred to as gastrointestinal defensin beddensin 6 and
the deduced AA sequences of the defensin 5 cDNA with the
previously reported preprodefensian sonws significant similarity.
The deduced AA sequence of defensin 6 cDNA bas features similar to
defensin 5 and the previously reported preprodefensins.

The microarray is also useful for monitoring progression of diseases and for developing sophisticated compination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The combination is also useful for purifying a subpopulation of mRNAs, cDNAs and genomic fragments and in research and diagnostic applications. The companies of the signaling pathway populations which can be used to diagnose constitutions diseases including cancer e.g. adenocarcinoma and leukaemia, constitutions of the invention of the invention of the present sequence represents a polynucleotide corobe of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       probe

These were isolated from expressed sequences tags (ESTS). They can be used to stimulate cell growth, to regulate haematopoiesis e.g. to treat aplastic anaemia, to help tissue regrowth e.g. in burn treatment, to regulate the immune system e.g. to treat multiple sclerosis, to regulate activin or inhibin e.g. to treat infertility, to regulate haemostasis or thrombolysis e.g. to treat stroke and cancer, to screen for drugs, to treat inflammatory conditions e.g. rheumatoid arthritis, and to treat nervous system disorders e.g. parkinson's disease. The present sequence is a coding sequence of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; antianaemic; vulnerary; antiinflammatory; immunomodulator; antiinfertility; cerebroprotective; cytostatic; rheumatic; gene temporotective; antiparkinsonian; protein therapy; EST;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention provides theta defensin peptides and analogues which have antimicrobial activity. They can be used in the treatment bacterial, viral, fungal, protozoan and helminthic infections, in disinfectants and as food preservatives.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention provides theta defensin peptides and analogues which have antimicrobial activity. They can be used in the treatment bacterial, viral, fungal, protozoan and helminthic infections, in disinfectants and as food preservatives.

Peptides and methods of the invention are useful for preventing retroviral infections in cells susceptible to bacterial or viral infections, or treating patients having infections such as HIV (human immunodeficiency virus), sexually transmitted diseases, bacterial vaginosis or ophthalmic infections. The retrocyclin-mediated killing is useful for modelling and screening novel antibiotics. The invention is also useful in gene therapy. The present sequence is rhesus monkey theta defensin 1b precursor, RTD2 DNA. This sequence is used in the exemplification of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New isolated retrocyclin peptide, useful for preventing retroviral infections in cells susceptible to bacterial or viral infections of treating patients having the infections, such as HIV, sexually transmitted diseases, vaginosis
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 495 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 53;

They can be used in the treatment bacterial, viral, fungal, protozoan and helminthic infections, in disinfectants and as food preservatives.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to novel retrocyclin peptides. Peptides and methods of the invention are useful for preventing retroviral infection in cells susceptible to bacterial or viral infections, or treating patients having infections such as HIV (human immunodeficiency virus), sexually transmitted diseases, bacterial vaginosis or ophthalmic infections. The retrocyclin-mediated killing is useful for modelling

                                                                                                                                                                                                                                                                                                                             A probe (D5' oligo) having the sequence given in AAQ53219 (claimed)
was used to screen a population of clones to identify novel defensin
clother defensin peptides. Pref. the libraries were human genomic and cDNA
clibraries. Hybridisation and partial sequence analysis of the
clibraries. Hybridisation and partial sequence analysis of the
clidentified clones contained previously characterised myeloid derived
defensin sequences as well as new defensin related sequences. Two
clones expressing new defensin related sequences were extensively
characterised and found to contain genes selectively expressed in
claracterised and found to contain genes selectively expressed in
claracterised and found to defensin. These Paneth cell-derived
defensins are designated human defensin 5 and human defensin 6 and
claracteristic to as gastrointestinal defensin peptides. Comparison
of the deduced AA sequences of the defensin 5 cDNA with the
previously reported preprodefensins shows significant similarity.

The deduced AA sequence of defensin 6 cDNA bas features similarity
clided to a specific of the defensin 5 cDNA with the
previously reported preprodefensins.

Clided the previously reported preprodefensins.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  CDS

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /cgn2_6/ptodata/2/pna/US6047_COMB.seq:*

US-09-486-580A-2
Sequence 2, Application US/09486580A
Patent No. 6329340
GENERAL INFORMATION:
APPLICANT: GENST SA
APPLICANT: GENST SA
ITILE OF INVENTION: THERAPEUTIC ADDITIONS
INTHE OF INVENTION: THERAPEUTIC APPLICATIONS
NUMBER OF SEQUENCES: 6
CORRESPONDENCE ADDRESS:
ADDRESSEE: Knobbe, Martens, Olson & Bear
STREET: 550 West C Street
CITY: San Diego
STATE: California
COUNTRY: USA
ILP: 92101
COMPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk
COMPUTER: IBM PC compatible
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: DATA: DATA:
APPLICATION NUMBER: US/09/486,580A
FILING DATA: FEBRUARY 25, 2000
ATTORNEY/AGENT INFORMATION:
RESTERENCE/DOCKST NUMBER: GENSET.064C1
INFORMATION CON RESPONSED FOR SEQUENCE CHARACTERISTICS:
LENGTH: 453 BASE FAIRS
TYPE: NUCLEOTIDE
STRANDEDNESS: DOUBLE
TOPOLOGY: LINEAR
MOLECULE TYPE: CDNA
